

Tatakon

drum + ebox

cnc'd from wood

All inside a 3d printed case!

The tatacon is a controller built for the rythm game Taiko No Tatsujin Specifically for the Nintendo switch version.

Powered by:

Arduino Mega2560 R3

+

Arduino Leonardo

To minimize latency and maximize speed, the ebox runs 2 arduinos each controlling different functions. They communicate and using the handy menu you can adjust settings like sensistivty. Also with an inbuilt digital switch controller. There's no need for extra joycons!
